Datum are a creative production agency that brings your event to life.

Our core event services

Consult.

Every project we work on starts the same way – with an in-depth consultation, to ensure we fully understand your brand and your goals. By building a strong picture of who you are and what you want to achieve, we can hit the ground running to create a stand that meets your marketing objectives.

Design.

Our team is dedicated to creative yet functional design. They have the vision that produce truly original stands, meeting all your requirements and looking to outshine the competition.

Manage.

We work with you throughout the whole process with an attentive, proactive approach. Our clear and regular communication will keep the project on track and on budget.

Build.

Our build teams have the skills and attention to detail to construct the highest quality of stands. They make sure that the build is complete and in plenty of time for the show open.

Review.

We have long-standing relationships with our clients, and this is due to the way we review everything we do. We encourage the process of having a review meeting in the weeks after the show to ensure future projects and builds can be as good as they can be.

Rebuild.

If you attend multiple shows, we can work with you to reuse and recycle elements of your stand wherever possible, helping to reduce waste and save money.

Kelda Technology has created the world's most efficient shower system, designed and manufactured in the UK. It's mission is to transform the way the world uses water.

Kelda aim to revolutionise methods of delivering water for the good of our planet. Over a quarter of the world's population is already facing water shortages and drought. Kelda is responding to urgent challenges by applying cutting edge science and engineering expertise to developing clean sustainable technologies.

Kelda uses British made innovation to disrupt stagnant thinking and change the global mindset.

The next generation of Kelda Technology Shower Systems feature SMART Control Hub incorporating digital microprocessor and fan to controls and propels the optimum flow of water and air.
